

# “Build-Your-Own” Scaled Bracers Guide

Build your bracers using [Mersona Maker!](https://realy.design/index.php/mersona-maker/) A free-to-play web browser game:

<https://realy.design/index.php/mersona-maker/>

A mobile-friendly version is in development.

**Start by choosing a base color** that matches the main colors from your tail(s) & accessories.

There are a number of customization options available to give your bracers more “punch” and more closely match the merfolk look you are going for. These are fully explained in this guide.

## Customization Options

These are optional and can be combined to create a variety of looks!

There is probably some sort of color fade in your tail/accessories already. Find that color/style and see which options here match it the closest.

### Color Fades:

Edges

Sides

Front & Back

Front

Back

Wrist

## Markings

Choose a marking pattern that matches your mersona! If these aren't quite what you're looking for, Really Design does offer [fully custom designs](#) (separate product page).

If combining markings with a fade, you'll have to choose if you want the markings or the color fade on top. If the fade is on top, the markings will be faded out with it. For best results, do not put light fades over dark colors.

**Koi Spots**

**Ripples**

**Caustics**

**Flames**

**Bubbles**

**Splotches**

**Stripes-Angled**

**Stripes-Radial**

**Spots**

**Stripes-spots**

**Tidepool**

## Outlines

If you're looking for an outlined effect, take a look at these options. Can be combined with markings, or selected on it's own.

If combining outlines with a fade, you'll have to choose if you want the outlines or the color fade on top. If the fade is on top, the outlines will fade out with it.

**Koi Spots**

**Ripples**

**Caustics**

**Flames**

**Bubbles**

**Splotches**

**Stripes-angled**

**Stripes-radial**

**Scale Outlines**

### **Our recommendation:**

Color fade is a simple and effective way to enhance the look of your bracers. If you have multiple tails in similar colors, a fade is versatile because you're not committed to a certain marking pattern.

**After you've decided what your bracers look like in Mersona Maker, click the "Ready to BUY!" button:**

This will redirect you back to the product page on the website. The options available on the product page mirror what's in Mersona Maker. The page will be filled out with criteria you input using Mersona Maker including a game generated code. **DO NOT ALTER THE CODE** which contains necessary information about the chosen colors and markings. Invalid, missing, or altered codes will cause delays.

- **If possible, please attach a snip/screen shot of the bracers you built in Mersona Maker!** This will help confirm order details are correct, and it will provide a guide to work from when painting your bracers.
  - Note: There is no screen shot function available in Mersona Maker at this time. You'll need to use print screen key or snip-it tool on your computer to save an image for upload here.
- Double check that everything looks correct, add to cart, and check out! We'll be in touch with you about order status and ship date.

As a reminder, if what you're looking for cannot be built via Mersona Maker we do offer completely custom bracer designs. There is a separate product page for this ["Scaled Arm Bracers – Custom Design"](#)

Thank you so much! We look forward to making you the best bracers!
